CORAL SEA

Reduced movement opportunity throughout the catchment with disconnection in dry season riverine habitats in Walsh and Palmer Rivers

Wetlands contain unique fish assemblages including more fish species that do not need to move to spawn
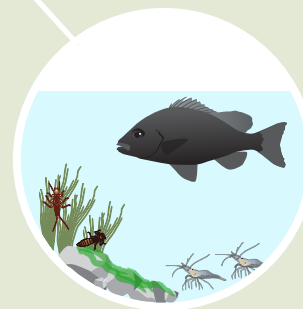

Macleay's glassfish

Chequered rainbowfish

MITCHELL RIVER

WALSH RIVER

PALMER RIVER

Kowanyama

Contraction of floodplain inundation with wetlands disconnecting from riverine habitats

Fish rely on local aquatic food sources to sustain dry season biomass as movement across the catchment is restricted
