

# Network mapping of environmental community groups active within the Northern Rivers

Current outputs

Resilient Landscapes

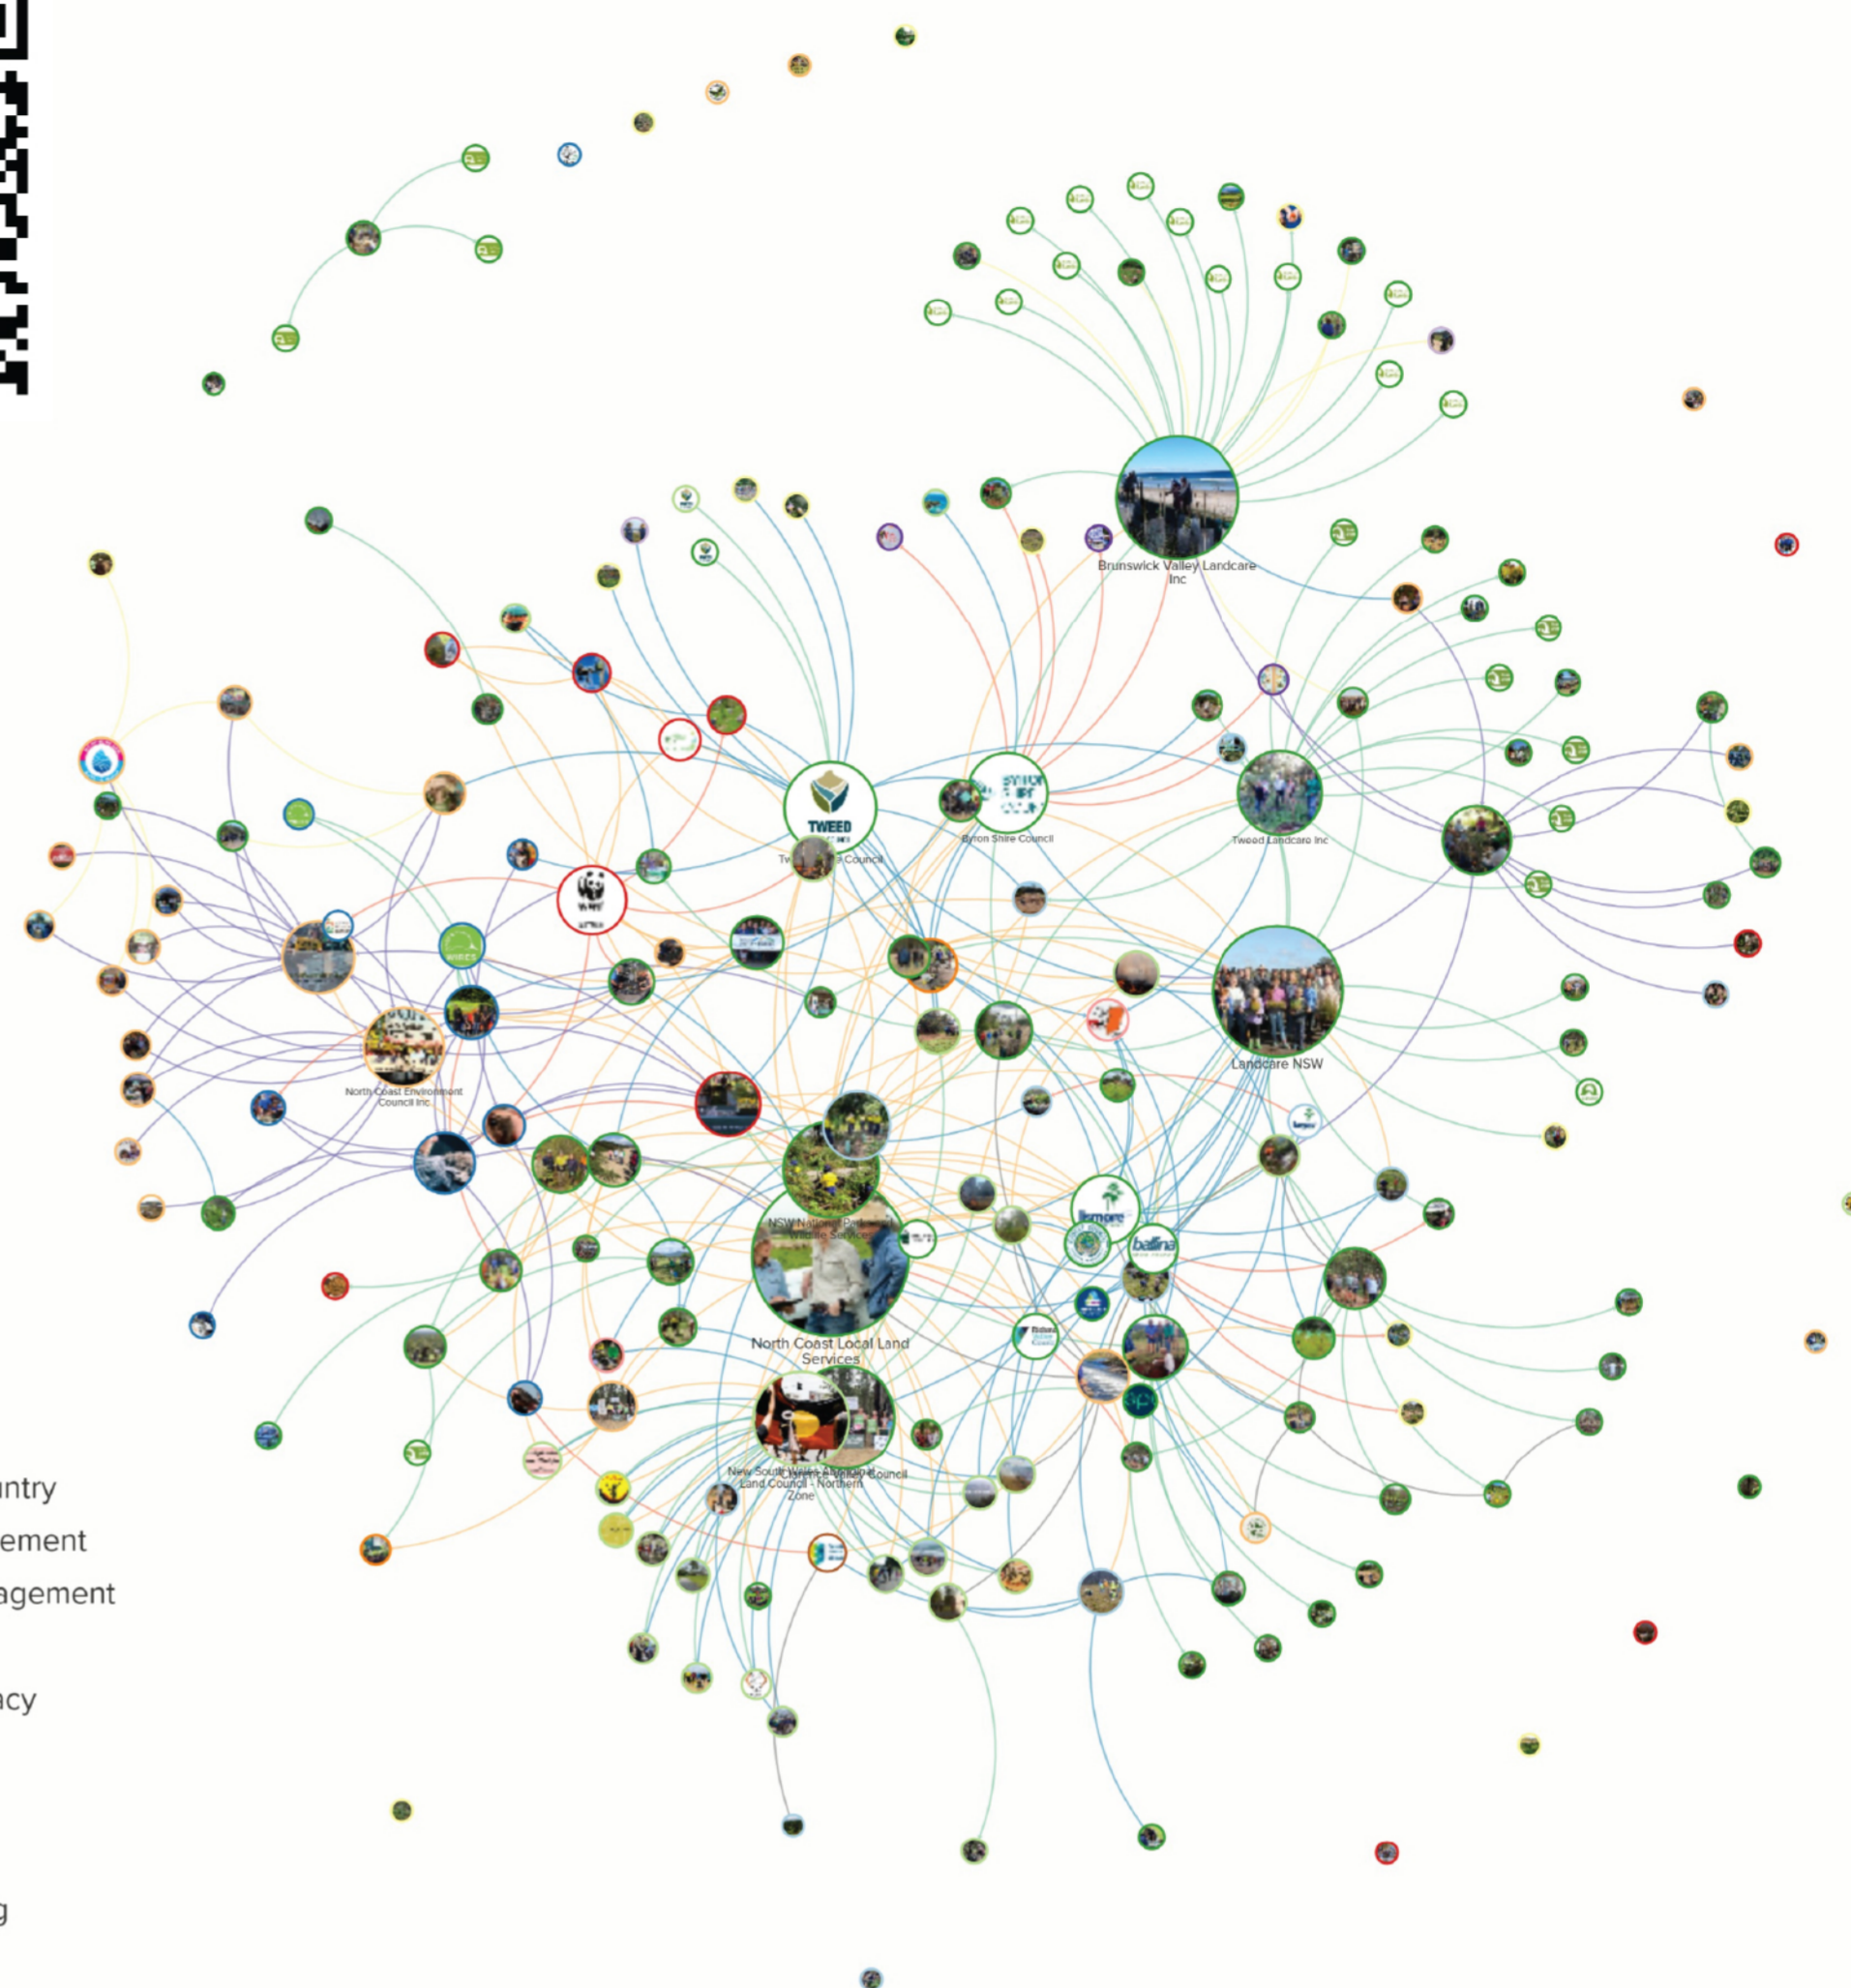

National Environmental Science Program

## Network map

The Northern Rivers is home to a treasure trove of environmental groups devoted to making the region and its ecosystems a better place. Knowing and understanding these groups and their connections is key to ensuring effective management of the area. This is why a publicly available network map has been created. It shows the numerous relationships and their nature between all groups.

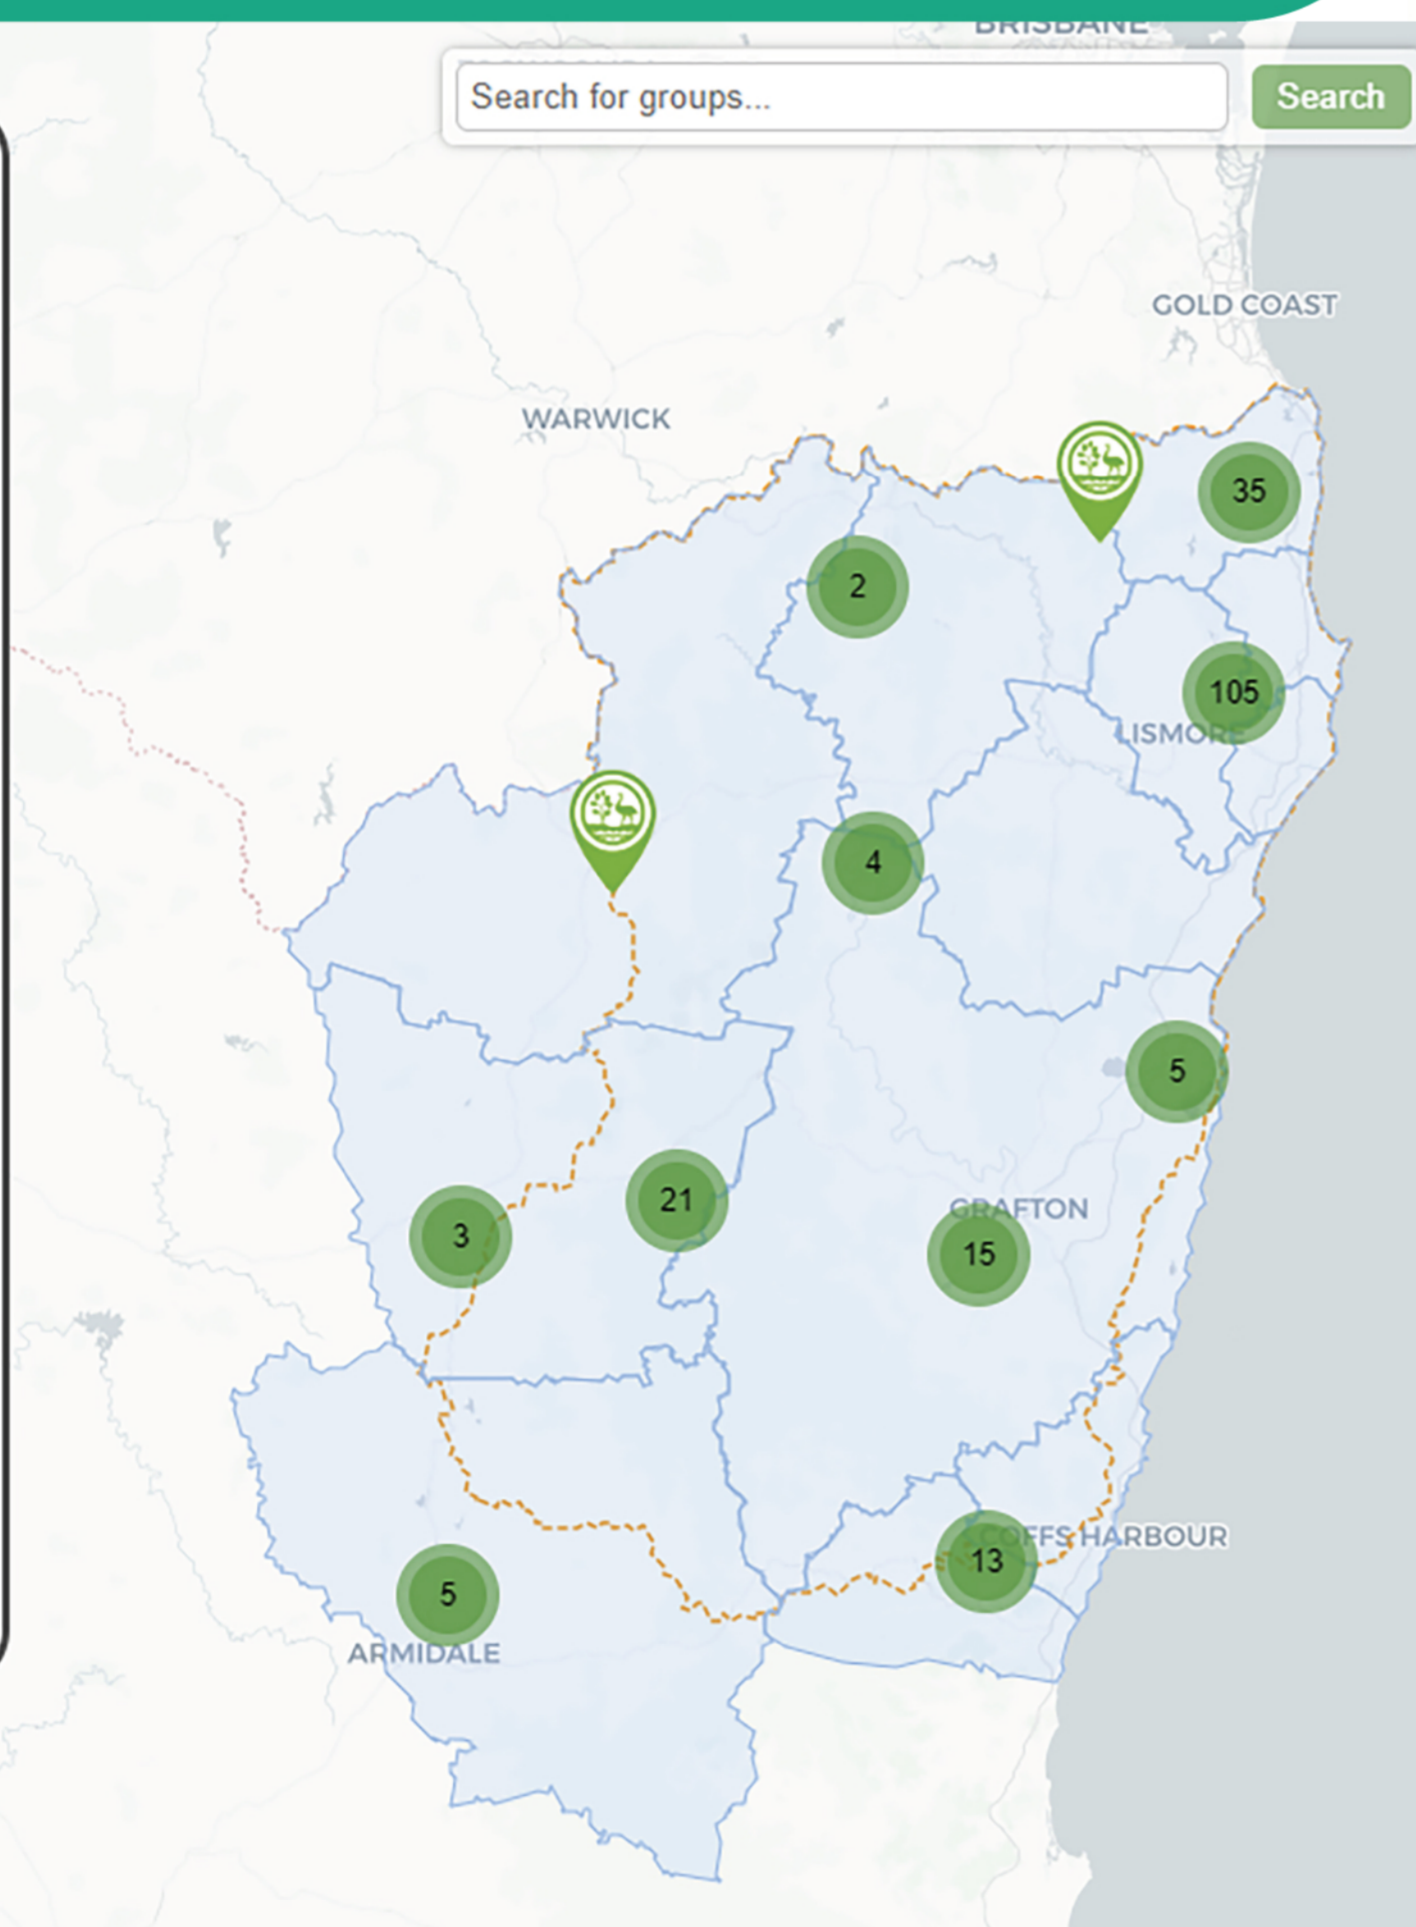

The map is constantly being updated with your and other's expert knowledge, so **any input is always welcome.**

## Geographical map

With so many activities going on, it is sometimes hard to understand what is happening in your region and what still needs to happen. As such, it is valuable to have insight into the geographical distribution of Northern Rivers' environmental groups. For this reason, an online map has been created showing all groups, their location, quick links to their web pages and contact details, and other relevant information visible in separate layers.

**We want your input!** Your knowledge is needed to complete and update this map. We especially want your help to add more accurate locations of each group's actions.
